Job description

The candidate would be responsible for maintaining/refreshing WBRs and other analytical frameworks setup by senior analysts. They would also be required to build simple reports, take up dive deep requests, make changes to existing analytical frameworks and provide adhoc data support to Ops stakeholders. The person should have a good understanding of a business requirement and the ability to quickly get to the root cause of a particular reporting/BI/data issue, and draft solutions for resolution. The ideal candidate would be high on attention to detail, bias for action and interest in analytics/BI/automation.

Some of the key result areas include, but not limited to:
- Own the design, development, and maintenance of ongoing metrics, reports, analyses, dashboards, etc. to drive key business decisions. Ensure data accuracy by validating data for new and resources.
- Work closely with stakeholders (internal/external) to understand and automate/enhance existing processes
- Should be open to learn and develop skillsets in the latest technologies and analytical techniques
- Should understand how data/analytical frameworks and their work translate to business on ground
- Should be able to come up with innovative ideas for new work or to improve existing work

Additional details for internal candidates

The candidate would be responsible for maintaining/refreshing WBRs and other analytical frameworks setup by senior analysts. They would also be required to build simple reports, take up dive deep requests, make changes to existing analytical frameworks and provide adhoc data support to Ops stakeholders. The person should have a good understanding of a business requirement and the ability to quickly get to the root cause of a particular reporting/BI/data issue, and draft solutions for resolution. The ideal candidate would be high on attention to detail, bias for action and interest in analytics/BI/automation.

Some of the key result areas include, but not limited to:
- Own the design, development, and maintenance of ongoing metrics, reports, analyses, dashboards, etc. to drive key business decisions. Ensure data accuracy by validating data for new and resources.
- Work closely with stakeholders (internal/external) to understand and automate/enhance existing processes
- Should be open to learn and develop skillsets in the latest technologies and analytical techniques
- Should understand how data/analytical frameworks and their work translate to business on ground
- Should be able to come up with innovative ideas for new work or to improve existing work

Basic qualifications

- 1+ years of data analytics or automation experience
- Bachelor's degree
- Knowledge of data pipelining and extraction using SQL
- Knowledge of SQL and Excel at a moderate or advanced level
- Knowledge of SQL/Python/R, scripting, MS Excel, table joins, and aggregate analytical functions
